

RUBBER RELEASE PN1231

Powdered rubber releasing agent

RUBBER RELEASE PN1231 is a powdered, rubber release agent. It is designed to prevent folded rubber sheet from sticking to itself after compounding and folded onto a pallet.

RUBBER RELEASE PN1231 is silicone-free and the treated rubber can be reworked without inter-adhesion problems. It has good levelling on rubber.

CHEMICAL AND PHYSICAL PROPERTIES

| | |
|-----------------------|--------------------|
| Appearance: | White/brown powder |
| Flash Point: | Non-flammable |
| Density (Apparent): | 1.0 |
| Foam Characteristics: | Low |
| Odour: | Low |
| pH (6% dispersion): | 7 - 9 |

DIRECTIONS FOR USE

RUBBER RELEASE PN1231 is mixed with cold water at the rate of 3 - 6 kg per 100 litres of water using a propeller stirrer or other suitable mixer. The hot rubber sheet is run through the bath and the rubber dried and folded on a pallet. It has low drag out and is economical in use. It has a low tendency to settle out.

EFFECT ON MATERIALS OF CONSTRUCTION

RUBBER RELEASE PN1231 is suitable for use in ferrous, stainless steel and plastic equipment.
