

CARPET STEAM CLEAN LB66

Concentrated Steam Cleaning liquid

CARPET STEAM CLEAN LB66 is a surfactant free extraction cleaner with unusual low wetting properties. This means that the liquid does not wet the carpet backing so that the drying time is much faster than normal, about 3 times as fast as a traditional cleaner which will soak into the carpet and wet the backing.

CARPET STEAM CLEAN LB66 has almost no foam. Because the dirt remains on the surface as a dry residue is is readily vacuumed off.

CARPET STEAM CLEAN LB66 removes most common stains such as cordial, soft drink, wine mustard, sauce and chocolate. Traditional cleaners with detergents can dislodge stains and carry them deep into the carpet pile. The soil can be emulsified and spread into a larger area away from the original stain. These stains can react with fibres making them harder to remove. The carpet may appear to be clean, but the stain can rise to the surface and reappear as the carpet dries.

Detergents can interfere with fibre treatments by removing kinks or bends thus changing the appearance of the pile. **CARPET STEAM CLEAN LB66** does not change the carpet surface so it retains its original appearance because the carpet pile is unchanged.

CARPET STEAM CLEAN LB66's low wetting properties do not interfere with stain repellent finishes which may have been applied to the carpet when it was manufactured. Detergents used in traditional carpet cleaners degrade the stain repellent properties of carpets while **CARPET STEAM CLEAN LB66** removes detergent residues thus helping to improve the stain repellency of the carpet.

CARPET STEAM CLEAN LB66 removes dirt particles more effectively than a traditional cleaner, including nano sized particles which typically come from smoke. These nano particles usually contain metals and can penetrate deeply into lungs and can cause allergies.

When **CARPET STEAM CLEAN LB66** dislodges the particles from carpet fibres they are kept in a dispersed state and can be extracted from the carpet. The removal of these particles from the carpet improves the air quality of a room.

CARPET STEAM CLEAN LB66 is suitable for use on carpets, upholstery and other fiber surfaces. Because it does not wet the fibers there is less untwisting of the carpet fibers and loops.

CHEMICAL AND PHYSICAL PROPERTIES

Appearance:	Thin pale yellow liquid
Flash Point:	Non-flamable
Foam Characteristics:	Very low
Specific Gravity:	1.0 (apparent)

DIRECTIONS FOR USE:

Apply at low pressure to the carpet. Leave for 1 – 5 minutes to allow the soil to disperse into the cleaning liquid.

Do not apply with high pressure to avoid forcing the cleaner deep into the carpet.

Extract the cleaner. The carpet should be 95% dry in about 2 hours.

Recommended usage rates for steam cleaning machines:

Use at the rate of 1:10 to 1:40.
